North
Central
South
structural constituent of eye lens
positive regulation of telomerase RNA localization to Cajal body
protein folding chaperone complex
axonemal dynein complex assembly
dynein axonemal particle
response to starvation
blood microparticle
response to stress
heat shock-mediated polytene chromosome puffing
amyloid-beta metabolic process
adenylate cyclase binding
negative regulation of amyloid-beta formation
myelin sheath
response to heat
protein-folding chaperone binding
response to unfolded protein
heat shock protein binding
ATP-dependent protein folding chaperone
protein refolding
chaperone cofactor-dependent protein refolding
protein folding
unfolded protein binding
protein folding chaperone
chaperone-mediated protein folding
translational elongation
translational initiation
maturation of LSU-rRNA
5S rRNA binding
ribosomal large subunit assembly
ribosomal large subunit biogenesis
focal adhesion
presynapse
postsynapse
large ribosomal subunit rRNA binding
positive regulation of signal transduction by p53 class mediator
mRNA binding
ribonucleoprotein complex
rRNA processing
small-subunit processome
ribosomal small subunit biogenesis
rRNA binding
ribosomal small subunit assembly
small ribosomal subunit
cytosolic small ribosomal subunit
large ribosomal subunit
cytoplasmic side of rough endoplasmic reticulum membrane
translation at presynapse
translation at postsynapse
translation
structural constituent of ribosome
ribosome
cytosolic large ribosomal subunit
cytoplasmic translation
cytosolic ribosome
respiratory chain complex I
mitochondrial proton-transporting ATP synthase complex
mitochondrial electron transport, cytochrome c to oxygen
regulation of mRNA 3′-end processing
regulation of DNA-templated transcription
sprouting angiogenesis
vascular endothelial growth factor receptor signaling pathway
RNA-DNA hybrid ribonuclease activity
viral translational frameshifting
DNA polymerase complex
DNA-directed DNA polymerase activity
aspartic-type endopeptidase activity
DNA recombination
endonuclease activity
DNA integration
symbiont-mediated suppression of host gene expression
symbiont entry into host cell
viral genome integration into host DNA
establishment of integrated proviral latency
virion assembly
host cell late endosome membrane
host cell plasma membrane
host multivesicular body
viral nucleocapsid
structural constituent of virion
Heat response genes
Ribosome-related processes
Mitochondrial respiration
Tf2-like retrotransposons
Viral processes and DNA metabolism
-log10 FDR
50 100
Gene count
